

## Call for Information on Palmyrah Palms with Unique Characteristics

We are excited to announce an initiative to gather information about palmyrah palms (*Borassus flabellifer*) exhibiting desirable or unique traits. As part of our effort to study and conserve this valuable resource, we invite farmers, researchers, and enthusiasts to share details about palms with the following special characteristics:

- **Big Fruit with High Pulp Yield:** Palms producing large fruits with abundant, quality pulp.
- **Pulp with Low Bitterness:** Palms yielding pulp with reduced bitterness, enhancing flavor and usability.
- **High Sap Yield:** Varieties known for producing significant amounts of sap.
- **Sap with High Sweetness:** Palms with naturally sweeter sap, ideal for food and beverage applications.
- **Dwarf Varieties:** Compact palms that are easier to harvest and manage.
- **Early Maturity:** Palms that mature quickly, ensuring faster yield.
- **Other Special Characteristics (Specify)**

### How You Can Contribute

If you are aware of such palmyrah palms or know of specific locations where they grow, we would love to hear from you. Please provide as much information as possible, including:

- Location details (village/town, district, etc.).
- Observations about the characteristics of the palms.
- Photographs, if available, to help us assess and document the features.
- Contact number

### Contact Us

You can share your findings through the following channels:

- **Email:** [Insert email address]
- **WhatsApp:** [Insert phone number]
- **Online Form:** [Insert link to an online submission form]

Your contributions will play a vital role in preserving and promoting the diversity and utility of palmyrah palms. Together, we can ensure the sustainable use of this important resource for generations to come.

Thank you for your support!
